

## Use Cases Document for Voting System

Prepared by Jacob Malin, Romeo Sweeney,  
Nathan Kjaer, Shruti Jayavardhanan

<b>Name</b>	Command Line File Input
<b>ID</b>	UC_INPUT_CLI
<b>Description</b>	A method for testers to use for inputting a file that works from the command line.
<b>Actors</b>	Testers, Programmers
<b>Organizational Benefits</b>	Allows testers and programmers to test the system using a command line prompt. Allows testers to run automated scripts to test different parts of the system.
<b>Frequency of Use</b>	As often as the system is tested using scripts or a command line argument is given manually by a tester.
<b>Triggers</b>	An actor runs the program from the command line.
<b>Preconditions</b>	None
<b>Postconditions</b>	The file will be verified to exist and be a valid election file.
<b>Main Course</b>	<ol style="list-style-type: none"><li>1. Ensure that there is 1 command line argument (see EX1).</li><li>2. Extract the file name from the command line argument array.</li><li>3. Verify that the file exists within the correct directory (see EX2).</li></ol>
<b>Alternate Courses</b>	None
<b>Exceptions</b>	<p>EX1 There are more than one command line arguments.</p> <ol style="list-style-type: none"><li>1. Inform the user that there is an incorrect number of command line arguments.</li><li>2. Resume at UC_INPUT_TEXT Main Course.</li></ol> <p>EX2 The file does not exist in the correct directory.</p> <ol style="list-style-type: none"><li>1. Inform the user that the file was not able to be found.</li><li>2. Resume at UC_INPUT_TEXT Main Course.</li></ol>

<b>Name</b>	Text Prompt File Input
<b>ID</b>	UC_INPUT_TEXT
<b>Description</b>	A method for users to use when inputting a file that works from inside the program.
<b>Actors</b>	Election Officials
<b>Organizational Benefits</b>	Allows Election Officials to input a file into the program in an organized method.
<b>Frequency of Use</b>	Whenever an Election official wants to run an election file.
<b>Triggers</b>	An election official runs the program, no command line argument is given, or the use case UC_INPUT_CLI or UC_EXTRACT follows an exception to this use case.
<b>Preconditions</b>	None
<b>Postconditions</b>	The file will be verified to exist and be a valid election file.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. The system will prompt the user to input a text file.</li> <li>2. The system will extract the file name from the user's input.</li> <li>3. The system will verify the file exists within the correct directory (see EX1).</li> </ol>
<b>Alternate Courses</b>	None
<b>Exceptions</b>	EX1 The file does not exist in the correct directory. <ol style="list-style-type: none"> <li>1. Inform the user that the file could not be found.</li> <li>2. Prompt the user again.</li> <li>3. Resume at Main Course Step 2.</li> </ol>

<b>Name</b>	Extract Info
<b>ID</b>	UC_EXTRACT
<b>Description</b>	Extract info from a given file and store for later processing.
<b>Actors</b>	System
<b>Organizational Benefits</b>	File is read and closed before processing the election, which allows for fewer opened files at once, and better separation of duties. All information from the file is stored in a table, which is easier to access than from the file.
<b>Frequency of Use</b>	Once every time an election is run.
<b>Triggers</b>	The file name is read in from UC_INPUT_CLI or UC_INPUT_TEXT.
<b>Preconditions</b>	File name is known and the file exists in the current directory. The file is a valid election file.
<b>Postconditions</b>	Information from the file will be stored. The votes will be tallied for parties and candidates. The file is closed.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. Open the file for reading (see EX1).</li> <li>2. Dump file contents (see EX2).</li> <li>3. Close the file (see EX3).</li> <li>4. Store CPL/OPL.</li> <li>5. Store the number of seats, ballots, and parties (see AC1).</li> <li>6. Store party names/candidates.</li> <li>7. Tally and store the votes for parties, candidates, and the total number of votes.</li> </ol>
<b>Alternate Courses</b>	AC1 This is an OPL election. <ol style="list-style-type: none"> <li>1. Store the number of seats, ballots, and candidates.</li> <li>2. Resume at Main Course Step 6.</li> </ol>
<b>Exceptions</b>	EX1 The file open errors. <ol style="list-style-type: none"> <li>1. Close the file.</li> <li>2. Inform the user that the file was not able to open.</li> <li>3. Resume at UC_INPUT_TEXT Main Course.</li> </ol> EX2 The file read errors. <ol style="list-style-type: none"> <li>1. Close the file.</li> <li>2. Inform the user that the file was not able to be read.</li> <li>3. Resume at UC_INPUT_TEXT Main Course.</li> </ol> EX3 The file close errors. <ol style="list-style-type: none"> <li>4. Inform the user that the file was not able to close.</li> <li>5. Resume at UC_INPUT_TEXT Main Course.</li> </ol>

<b>Name</b>	CPL
<b>ID</b>	UC_CPL
<b>Description</b>	A program to evaluate an election based on Closed Party Listing rules.
<b>Actors</b>	System
<b>Organizational Benefits</b>	Turns the ballot list into results of the election, making the winners of the election clear.
<b>Frequency of Use</b>	Whenever a file is in CPL format, therefore whenever a CPL election is run.
<b>Triggers</b>	The use case UC_EXTRACT completes, and the election type is CPL.
<b>Preconditions</b>	Information from the file is stored.
<b>Postconditions</b>	The CPL results have been calculated and the winners are known.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. Divide the number of votes by the number of seats to obtain the quota (see EX1).</li> <li>2. Divide each party's votes by the quota to obtain both the first allocation of seats and the remainder (see AC1).</li> <li>3. Calculate the remaining number of seats.</li> <li>4. Allocate the remaining seats based on the remaining votes in decreasing order (see AC2, AC3, EX2).</li> <li>5. Add up the final seat totals.</li> <li>6. Distribute the seats in each party in the order listed in the input file.</li> </ol>
<b>Alternate Courses</b>	<p>AC1 There are more seats in the first allocation than party members or an equal number of seats and party members.</p> <ol style="list-style-type: none"> <li>1. The number of seats allocated is set to the number of party members.</li> <li>2. The party is removed from consideration for further seats.</li> <li>3. Resume at Main Course Step 3.</li> </ol> <p>AC2 There are no remaining seats.</p> <ol style="list-style-type: none"> <li>1. Resume at Main Course Step 6.</li> </ol> <p>AC3 There is a tie.</p> <ol style="list-style-type: none"> <li>1. Break the tie: refer to UC_COIN_FLIP.</li> <li>2. Then resume at Main Course Step 5.</li> </ol>
<b>Exceptions</b>	<p>EX1 There are no votes or no seats.</p> <ol style="list-style-type: none"> <li>1. All parties get 0 seats.</li> </ol> <p>EX2 All parties have been removed from consideration for further votes.</p> <ol style="list-style-type: none"> <li>1. The remaining seats are not allocated.</li> <li>2. Resume at Main Course Step 6.</li> </ol>

<b>Name</b>	OPL
<b>ID</b>	UC_OPL
<b>Description</b>	A program to evaluate an election based on Open Party Listing rules.
<b>Actors</b>	System
<b>Organizational Benefits</b>	Turns the ballot list into results of the election, making the winners of the election clear.
<b>Frequency of Use</b>	Whenever a file is in OPL format, therefore whenever an OPL election is run.
<b>Triggers</b>	The use case UC_EXTRACT completes, and the election type is OPL.
<b>Preconditions</b>	Information from the file must be stored.
<b>Postconditions</b>	The OPL results have been calculated and the winners are known.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. Divide the number of votes by the number of seats to obtain the quota (see EX1).</li> <li>2. Divide each party's votes by the quota to obtain both the first allocation of seats and the remainder (see AC1).</li> <li>3. Calculate the remaining number of seats.</li> <li>4. Allocate the remaining seats based on the remaining votes in decreasing order (see AC2, AC3, EX2).</li> <li>5. Add up the final seat totals.</li> <li>6. Order the candidates by popularity in each party (see AC4).</li> <li>7. Distribute the seats in each party in the order calculated.</li> </ol>
<b>Alternate Courses</b>	<p>AC1 There are more seats in the first allocation than party members or an equal number of seats and party members.  The number of seats allocated is set to the number of party members.  The party is removed from consideration for further seats.  Resume at Main Course Step 3.</p> <p>AC2 There are no remaining seats.  1. Resume at Main Course Step 6.</p> <p>AC3 There is a tie.  3. Break the tie: refer to UC_COIN_FLIP.  4. Then resume at Main Course Step 5.</p> <p>AC4 There is a tie.  1. Break the tie: refer to UC_COIN_FLIP.  Then resume at Main Course Step 7.</p>
<b>Exceptions</b>	<p>EX1 The file is for a CPL election.  1. Resume at step 4 of UC_CPL.</p> <p>EX2 The OPL election fails to run.  1. The system sends out a notification about the failure.  2. Returns to Main Course 1</p>

	<p>EX3 Election results are not written.</p> <ol style="list-style-type: none"><li>1. The system sends out a notification about the failure.</li><li>2. Return to Main Course step 2.</li></ol>
--	---

<b>Name</b>	Produce Audit File
<b>ID</b>	UC_AUDIT
<b>Description</b>	The system generates an audit file containing the election details (such as seat allocations, winners, and relevant statistics).
<b>Actors</b>	System
<b>Organizational Benefits</b>	Provides transparent records of the election process and can be used to communicate with media people without giving private info.
<b>Frequency of Use</b>	At the end of each election process.
<b>Triggers</b>	Completion of seat allocation and winner decision process, either use case UC_OPL or UC_CPL.
<b>Preconditions</b>	Winners and seat allocations have already been determined.
<b>Post Conditions</b>	An Audit File is generated and saved with all the information outline in the Main Course. This file is assumed to be correct and contains all relevant information.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. Open an audit file for writing (see EX1).</li> <li>2. Write the type of election.</li> <li>3. Write the number of parties, ballots, and seats.</li> <li>4. Write the candidates' names and party affiliations.</li> <li>5. Write the calculation for the largest remainder approach.</li> <li>6. Write a list of the seat winners and party affiliations (see AC1).</li> <li>7. Save the file (see EX2).</li> </ol>
<b>Alternate Courses</b>	AC1 This is for OPL. <ol style="list-style-type: none"> <li>1. Also write the number of votes that each candidate received.</li> <li>2. Resume at Main Course Step 7.</li> </ol>
<b>Exceptions</b>	EX1 File does not open. <ol style="list-style-type: none"> <li>1. Inform the user that the audit file was not able to be opened.</li> <li>2. Resume at UC_INPUT_TEXT Main Course.</li> </ol> EX2 File isn't saved properly. <ol style="list-style-type: none"> <li>1. Inform the user that the audit file was not able to be saved.</li> <li>2. Resume at UC_INPUT_TEXT Main Course.</li> </ol>

<b>Name</b>	Display results
<b>ID</b>	UC_DISPLAY
<b>Description</b>	The system displays election results to the screen (such as seat allocations, winners, and relevant statistics).
<b>Actors</b>	System
<b>Organizational Benefits</b>	The user can view the results in a readable format.
<b>Frequency of Use</b>	At the end of each election process.
<b>Triggers</b>	Completion of seat allocation and winner decision process, either use case UC_OPL or UC_CPL.
<b>Preconditions</b>	Winners and seat allocations have already been determined.
<b>Post Conditions</b>	The results are displayed on the screen.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. Display the type of election and number of seats.</li> <li>2. Display the number of ballots cast and the winners.</li> <li>3. Calculate stats for all candidates and display them to the screen. This includes number of votes, percentage of votes, and if they won.</li> </ol>
<b>Alternate Courses</b>	None
<b>Exceptions</b>	None

<b>Name</b>	Coin Flip (Tie)
<b>ID</b>	UC_COIN_FLIP
<b>Description</b>	The system provides a mechanism for handling ties via a “coin flip”
<b>Actors</b>	System
<b>Organizational Benefits</b>	Allows for ties in a CPL or OPL election.
<b>Frequency of Use</b>	Each time a tie occurs.
<b>Triggers</b>	Use cases UC_OPL or UC_CPL encounter a tie when two or more candidates have the same number of votes cast. Use cases UC_OPL or UC_CPL encounter a tie when two or more parties have the same number of remaining votes.
<b>Preconditions</b>	OPL or CPL must be actively running.
<b>Post Conditions</b>	A tie is handled fairly and the chosen candidate receives the seat.
<b>Main Course</b>	<ol style="list-style-type: none"> <li>1. A tie is encountered where one or more candidates receive the same number of votes.</li> <li>2. Compute a random number for each candidate after looping 1000 times to ensure fairness (see EX1).</li> <li>3. Compute a random number that determines the winner after looping 1000 times to ensure fairness (see EX1, EX2).</li> <li>4. The winner is the one closest to the system-generated number.</li> <li>5. Assign the winner their seat.</li> <li>6. Resume as described in the respective use case.</li> </ol>
<b>Alternate Courses</b>	None
<b>Exceptions</b>	EX1 The system fails to loop 1000 times to ensure fairness. <ol style="list-style-type: none"> <li>1. Return to Main Course Step 2.</li> </ol> EX2 The random number generation ties. <ol style="list-style-type: none"> <li>1. Return to Main Course Step 2.</li> </ol>
